Swipe-deck format | 6 chapters | 2026

GoalOS AI in production.

GoalOS ships as a local-first web demo, Android companion, and Cloudflare Workers deployment - turning screen time into goal time.

This runbook walks you through launch, verification, troubleshooting, and release - the same flow used to ship oss-goalos-ai to production.

G

Goal Alignment Score

Explainable daily 0-100 score with v1 formula.

A

AI Coach

Browser-local WebLLM - no API key required.

F

Focus Sprints

Intent Gate + timed deep work blocks.

P

Privacy-first

Usage patterns only. Data stays on device.

Builders track hours. Not ambition.

Screen time without context

Dashboards show minutes, not whether those minutes moved goals forward.

Scattered tools

Coaches, blockers, and to-dos live in different tabs with no shared loop.

API-key fatigue

AI productivity stacks often need keys, servers, and Docker before day one.

Deploy drift

README links, demo URLs, and static exports fall out of sync after launch.

One product loop. Three surfaces.

W

goalos-web

Next.js static export, WebLLM coach, localStorage persistence.

A

goalos-android

Kotlin + Compose, real UsageStats tracking, shared scoring.

C

Cloudflare Workers

wrangler deploy serves goalos-web/out at the edge.

E

Enterprise shell

Demo auth, admin console, optional SaaS microservices.

Product loop: Goal Setup -> DNA -> Usage -> Intent Gate -> Alignment Score -> Coach -> Sprint -> Identity

Clone to live in minutes.

```
git clone https://github.com/akhilvydyula/oss-goalos-ai.git  
  
cd oss-goalos-ai && npm run dev  
  
npm run build  
  
npx wrangler deploy
```

0

API keys for demo coach fallback

4

Smoke routes: / /login /web /app

49s

Cinematic LinkedIn promo ready

Demo creds & smoke test.

V

/

Landing page loads

V

/login/

Demo sign-in: admin@demo.goalos / Demo1234!

V

/web/

Product demo + AI coach

V

/app/

Enterprise shell + admin

V

/mobile/

Phone-frame mobile UI

"You're not distracted - you just don't have an operating system for your goals yet."

GoalOS AI product thesis

Star the repo. Share the demo. Ship your PR.

1 Point every README at production

<https://oss-goalos-ai.akhilvydyula1111.workers.dev/>

2 Attach the cinematic promo on LinkedIn

[goalos-cinematic-promo.mp4](#) (~49s)

3 First comment: live demo + GitHub link

Keeps LinkedIn reach high

4 Tag releases for Android APK

`git tag v0.x.x && git push origin v0.x.x`

[Open live demo](#)

Common fixes.

next: not found

Run root npm run build - installs goalos-web deps first.

Worker 404

wrangler.toml assets directory must be ./goalos-web/out

Coach won't load

Use Chrome/Edge + WebGPU; rule-based fallback works.

JAVA_HOME missing

Install JDK 17 and set JAVA_HOME for Android builds.

Promo video rebuild: npm run build:cinematic-promo

Import readme art: python goalos-web/scripts/import-readme-media.py <folder>

GoalOS AI
